### Description

I downloaded the 3.8.1 binary file for ubuntu 12.04 and install into ubuntu 12.10 server. After installing it with `dkpg -i && apt-get install -f -y` (to solve dependencies automatically). I was able to add a new host(same as frontend) using KVM, and run 9 vm on it. However, after a while the STATUS for this host always changed to ERR.

I try to reboot oned, then is OK to monitor host and vm. However, after a while the STATUS for this host always changed to ERR again!!

I can ssh to host without passwd

```
oneadmin@nebula:~$ ssh oneadmin@nebula
```

I try the solution in <http://dev.opennebula.org/issues/1041>, but it's not effective.

thanks for your help!
