

OpenNebula - Feature #1749

[Self-service] Add a check to avoid duplicate vm name

01/31/2013 04:16 PM - Nicolas AGIUS

Status:	Closed	Start date:	01/31/2013
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Sunstone	Estimated time:	0.00 hour
Target version:		Pull request:	
Resolution:	wontfix		
Description			
When a user create a vm with a name that already exist, it could cause some problems (ie. with DNS records or some mismatch when deleting)			

History

#1 - 01/31/2013 04:31 PM - Nicolas AGIUS

- File *compute.js-issue1749.patch* added

This patch check if the name of the new vm does'nt already exist in the list of the user's vm.
It does'nt check the name against other users' vm.

This patch has only been tested with Opennebula 1.8.1
Thank Mathieu Alorent for this code.

#2 - 02/04/2013 02:15 PM - Nicolas AGIUS

- File *OCCIserver.rb-issue1749.patch* added

Same patch but directly in the OCCI daemon to also protect access by the API.

#3 - 05/09/2013 04:09 PM - Carlos Martín

- Status changed from *New* to *Closed*
- Resolution set to *wontfix*

Closing this one, since self-service is now discontinued.

If there is really a need to make VM names unique, it should be implemented at the oned level. Maybe as an option in oned.conf.
