

OpenNebula - Bug #1879

the guest VM will not know which file in the FILES_DS is each file, since they are renamed to a hash

04/08/2013 12:31 PM - Jaime Melis

Status:	Closed	Start date:	04/08/2013
Priority:	Normal	Due date:	
Assignee:	Jaime Melis	% Done:	0%
Category:	Core & System	Estimated time:	0.00 hour
Target version:	Release 4.0	Pull request:	
Resolution:	fixed		
Affected Versions:	OpenNebula 4.0		

Description

If a user adds a set of context files to a virtual machine, it will result in:

```
FILES_DS="/var/lib/one/datastores/2/<hash1> /var/lib/one/datastores/2/<hash2>"
```

Therefore the user will not know which file is which without analyzing it. A temporary workaround would be to provide only a single file, a tar.gz, with other files.
