Description
Current vmcontext script does not recognize current operation (start, stop, reload) and proceed all steps on each run. Specially it runs on VM reboot / shutdown initiated from OS. This could be easily fixed by adding standard case operator with start/stop/reload selection.

- Status changed from New to Assigned

You are right. While we don't fix this you can add this lines just after function declaration in /etc/init.d/vmcontext:

```bash
if [ "$1" != "start" ]; then
  exit 0
fi
```
