Target version:			
Pull request:			
Description			
<p>I think adding init commands like 'start-sunstone stop-sunstone restart-sunstone' doesn't make any sense in real-world production setups. You won't be able to address those commands from your configuration mgmt system like saltstack, puppet or any other. Managing novnc in the sunstone init script also causes a problem when you want to stop the dev-webserver of sunstone but novnc should be running.</p> <p>Please don't manage novnc with the sunstone init script. People that are able to exec 'service opennebula-sunstone start' are able to exec 'service opennebula-novnc start', too.</p> <p>Refer to https://github.com/OpenNebula/one/commit/bbce1ab1ab47f664a1777da5638a131d5199c188.</p>
