Category:	Estimated time: 0.00 hour
Target version:	Pull request:
Resolution: worksforme	
Description	
<p>I would like to set hostnames based on the role, service definitions. At moment i end with vmnames like the following: "web_0_(service_18)" can it made possible to to assign a name to the oneflow service to have the \$NAME field show something like <rolename>_<instanceNr>_<servicename>?</p>

You can change how the vm names are built in the oneflow-server.conf file:

<https://github.com/OpenNebula/one/blob/master/src/flow/etc/oneflow-server.conf#L49>

#2 - 11/16/2015 03:54 PM - Ruben S. Montero

- Status changed from Pending to Closed

- Resolution set to worksforme
