Description			
<p>Hello,</p> <p>I created a new template on a new ONE 4.14.2 and tried to cut&paste the template from an older ONE and get the surprise that the NAME attribute was missing.</p> <p>Next I tried to:</p> <ul style="list-style-type: none">- fill the NAME attribute in the Wizard view- switch to Advanced view- paste the content of the Advanced view of the older nebula <p>But I got the same error:</p> <p>[TemplateAllocate] Error allocating a new virtual machine template. Invalid NAME, it cannot be empty</p> <p>I was forced to fill the NAME="myname" in the Advanced view.</p> <p>So I think the same should be displayed in that view.</p> <p>Regards.</p>

This is done in purpose. The name needs to be changed with the rename action, so it would be confusing to preserve NAME inside the template when it can't be edited.
