

OpenNebula - Request #4616

Sharing resources with a list of users instead of the whole group

07/01/2016 01:39 PM - EOLE Team

Description			
<p>Hello,</p> <p>This is a low priority request.</p> <p>In our team, we sometime need to share a running VM with another member of the team.</p> <p>Today, we share it with the group and everybody in the group see the VM, which could became tedious when multiple pair workers need to share VMs.</p> <p>Could it be possible to select some users in my groups with who to share resources?</p> <p>Regards.</p>

I see two options, create a group for the people working together (a user can be in multiple groups). Or create special ACL rules...

Unfortunately this is not really dynamic, we do some pair working, sometime each one on its own computer, but need to use the same resources.

The pairs (or more) are defined more or less per [story or task](#), so we can't define them statically...

Regards.
