Description			
Hi			
This is just a cosmetic request, right now Sunstone shows the IP of the running VMs. It would be possible to include the hostname instead of the IPs?			
Sunstone could use the nslookup command to check if the IP is included in the DNS, if not it will show the IP as usual.			
This change will help to the users to connect and handle their VMs if some IP pools are already available in the DNS.			
Cheers and thanks			
Alvaro
