Description			
<p>This issue is to implement several enhancements to user inputs:</p> <ul style="list-style-type: none">- <i>Optional/Mandatory</i>: Set input fields not required by default or a way to individually toggle them from required to not. I have a template right now with 8 fields, some to all of which may not be used. Right now I have users putting blank spaces into them to work around this but it would be much more user friendly to allow them to only fill in the ones that they need.- <i>Default Values</i>: As described above- <i>Boolean User Input</i>- <i>Order</i>
