Target version:			
Pull request:			
Description			
<p>When I want to update a script file in FILES I am searching the hashes in FILES datastore to find the needed file, then edit it.</p> <p>I would like to have an option to download a file via CLI/Sunstone, alter it then upload/replace the file in the datastore.</p> <p>And, if it is easier at lest show the file hash in the CLI/Sunstone so to not seek all files in the datastore...</p> <p>Kind Regards, Anton Todorov</p>

+1 for this

It is quite hard at the moment to update such files. Also - if the file grows (or shrinks) the shown size does not get updated it seems.
