

OpenNebula - Bug #5121

OneFlow-server not support run separated of main server

04/21/2017 01:29 PM - kvaps kvaps

Status:	Closed	Start date:	04/21/2017
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	OneFlow	Estimated time:	0.00 hour
Target version:		Pull request:	
Resolution:	worksforme		
Affected Versions:	OpenNebula 5.2		

Description

Part of `oneflow-server.conf`:

:one_xmlrpc: <http://opennebula:2633/RPC2>

But sunstone report this error:

Failed to open TCP connection to localhost:2633 (Connection refused - connect(2) for "localhost" port 2633)

Very-very dirty workaround is changing ip address of localhost in /etc/hosts file from 127.0.0.1 to opennebula's ip, works fine.

History

#1 - 04/25/2017 10:30 AM - Ruben S. Montero

- Status changed from Pending to Closed

- Resolution set to worksforme

I cannot reproduce it. Could you double check (i.e. restart the oneflow server)?
