Pull request:				

Description

Currently the ldap driver does not support groups withing groups.

Besides supporting nested groups in LDAP, which should probably be a setting like:

nested_groups: true

It would probably be better to replace the group option with something like ldap_access_filter (check the sssd.conf man page), where you can write any LDAP filter which needs to be matched for a user to allow the user to login. This will give more flexibility on who to allow to login, then just setting a single group.
