Target version:	Release 3.0	Pull request:	
Resolution:	fixed		
Description			
Services like Suntone, OCCl, or any other high-level tools should be able to ask the core to authenticate a session token. This way, the core will redirect the authenticate request to any external module in use.

The [one.user.info](#) method can be called with user_id -1 to:

- Check if the session token is authenticated
- And retrieve all the user information. This will include groups in the future.
