Target version:	Release 3.0	Pull request:	
Resolution:			
Affected Versions:			

Description

Sysv-rc is the default runlevel manager in linux distributions like debian.

The default opennebula vmcontext.sh script for debian does not fit well in a such mechanism, because you need is to execute it before the starting of the networking script.

The attached file is a modification of this script to add LSB compatibility.

Copy it in /etc/init.d/ and install with "update-rc.d vmcontext.sh start 01 S"
